

## FAST & EASY TASK ENTRY

Collecting and storing labor data has always been an arduous task and sometimes redundant. The taskTracker eliminates the redundancy of data collection.

### taskTracker:

- Easily assigns tasks to current workers.
- Displays those assigned tasks on a High Definition TV.
- Saves all data to the *Cloud* for easy access from anywhere.
- Updates in real-time allowing changes to be made from anywhere at any time.

## EFFECTIVE COMMUNICATION

Making changes on the fly isn't always easy, but taskTracker can go where you go. Make a change on your phone and have it show up on the display board in the shop, or inform your assistants on their smart phones.

Keeping everyone organized from day to day is a challenge. It becomes even more difficult when you are away, but taskTracker allows you to build work boards in advance allowing programs and tasks to be completed when you are away from the course.

## CLOUD STORAGE AND MOBILE ACCESS

Data is stored in the *Cloud*, allowing access to it whenever and wherever you choose. You can assign jobs from your smart phone, computer, or tablet, and taskTracker will sync them across all devices.

## DETAILED REPORTING

Show members of your team and your management where labor dollars are being spent. Use historical data to improve labor efficiencies, explain budget variances, or forecast future labor savings.

### PRICING

Setup and Activation	\$600.00
Monthly Storage and Maintenance	\$49.00/month
or	
Yearly Storage and Maintenance	\$470/year
